

MISD

GO GREEN:

For a better planet

From little,
simple ideas,
big ideas can
GROW!

Take your idea further!

This log belongs to _____

I'm a green Little Inventor!

Draw a picture of yourself outside!

My name is

I am years old

I live in

My experience of nature

.....
.....
.....

Five facts I have found out about nature or the environment:

-
-
-
-
-

What I like best about the outdoors:

-
-
-

The future I want for the environment:

-

If I could improve ONE thing now about how we look after our planet, it would be:

.....
.....

Now use the activities in the resource pack to get you started and once you have all your thoughts about our planet and go green ready, get inventing!

Your go green invention!

(the first of many?)

More about your idea

What inspired your idea?

What problem are you trying to solve?

If you had to add something to it, what would it be?

What if you had to remove something? How would that change your idea?

What do you like best about your idea?

Top tips to take your idea further

Here are some ways to think more about your idea to really bring it to life, first to you and then to the world!

Bring in extra brainpower!

Talk to different people about your idea – it might spark more ideas to make your idea better, or even start you on a new one!

Write a story or comic!

Try writing or drawing a story where someone has a problem, and then they get to use your invention. What happens?

Be an internaut

Go on the Internet to see if anyone has done anything a bit like your idea. How is yours different, or how can you change it to make it unique? Inventing is often about improving something that already exists, so what's your take on it?

Sleep on it

Not literally! But take the time to forget about your idea and come back to it with a fresh pair of eyes. What would you do differently (or not!)?

Swap up

Your idea might be for someone or something specific. What if someone or something completely different was trying to use it? What would happen?

Draw it again

When you've had a chance to think some more, have another go at drawing the same idea. What do you want to add or remove?

Make a model!

What's the story?

Now that you have come up with your invention, write or draw a short story or comic strip to show the following:

Describe who your invention is for:

A large, empty yellow rectangular box for writing the answer to the question: "Describe who your invention is for:"

What is the problem they face?

A large, empty yellow rectangular box for writing the answer to the question: "What is the problem they face?"

What is your invention? How is it used, and how is it helpful?

A large, empty yellow rectangular box for writing the answer to the question: "What is your invention? How is it used, and how is it helpful?"

My invention comic

Design a mission badge for go green

Make it colourful, bright and eye catching!

Draw it here!

And when you're ready to think of new ideas....

Use the activities in the resource packs, such as...

Character profiler

Use this profiler to give your planet saving superhero a personality! What do they like, what annoys them? Every character is different.

Go green mind map

Use this mind map to think of ideas about how to live on planet earth and what problems we might face.

Go green

Use this sheet to explore specific ideas or features of our environment.

Invention ideas log

Other inventions I want to draw:

Challenges I want to solve:

People I want to help:

From 2D to 3D!

Drawing is a fantastic way to capture your ideas when inventing, and it should always be the first step. Now we need to propel your ideas into the next dimension – from the paper into reality – from 2D to 3D!

The first step to a real invention is to make a model of it. This is called prototyping. It doesn't need to actually work, it's really to start seeing how your object could look as a real thing.

Designers, architects and artists all do it. They get messy with materials to feel what their idea is like in their hands before they embark on a project, and they spend quite a long time making models to make sure they get it right.

It's a lot of fun! So let's get making!

What you need

Making prototypes doesn't need special materials or skills.

You can find lots of things around the house that you could use (but make sure it's OK with a grown-up!). For example, cardboard is great. It's everywhere and you can cut it, roll it, squish it and fold it into pretty much anything!

Keep empty cereal boxes, egg cartons and toilet paper and you will have some ready-made shapes to play with. What a fun way to recycle!

You could use cardboard packaging, old shoe boxes, paper plates or paper cups of different textures and thickness.

These are just some of the things you could use, but the list doesn't have to stop there. It's another chance for you to use your imagination!

Thinking in 3D...

Once you have your invention drawing, it's a good idea to think about how it will look from different sides. This will help you to start imagining what it will look like as a real object.

Chief Inventor Dominic invented **the snack shoe!**

Side view

Back view

Front view

Bird's-eye view

"Sometimes you get hungry but there are no shops around. This way I can always have a quick snack when I need it."

Prototyping the snack shoe!

Before he started, Dominic had to think about how big his invention was going to be. He wanted it to be a life-size version!

1. Draw the outline of the side of the shoe.

2. Cut it out!

3. Use the first shape as a guide to draw and cut all the parts you need.

4. Glue the parts together.

5. Add tape to secure the parts, and for decoration!

6. Use scissors to make holes and tie all the arm pieces together with string.

7. Tape to the inside of the shoe.

You're done!

TOP TIP:

You can see me making the snack shoe at littleinventors.org

Plan your prototype

Before you make a model of your invention, it's a good idea to think about how it will look from different sides:

Front view

Side view

Back view

Bird's eye view

Think about:

- the materials you might use (think recyclables!)
- the size of your prototype
- the shapes and elements
- the way they connect together

Now you're ready to get making!

Now get making!

By creating a 3D model of an invention idea we can start to make more decisions about its design.

We can see if it should be bigger or smaller, more angular etc. We can find out if our idea on paper works in reality, or if it needs to be altered to work better.

Think about:

- *the size of your prototype*
- *the shapes and elements that make up your invention*
- *the way they connect together*

Then it's really about **getting started and having fun!**

Some fun techniques you could try:

Layering

Slotting

Bending

Texturing

What have you learned about your invention?

Having a go at making your idea into a 3D object can seem daunting, but it will also help you continue thinking about your idea.

You will figure out what works best and what works less well. And that might make you think about how you can improve on your original idea!

Remember: everything you do is helping you to understand your idea better, so you can take it even further – and who knows, maybe even make it into a real working prototype too!

TOP TIP:

Some people also like to start inventing just by playing with materials!
